## 1 Model

In this tests we used a feed-forward Neural Network with 64 input neurons and 1 output neuron. The fixed settings are:

- The activation function of output neuros is Leaky-ReLU ( $\alpha = 0.05$ )
- Optimizer = SGD with Momentum ( $\mu = 0.9$ )
- • Initializer for weights connection and bias is Random Normal with  $\mu=0$  and  $\sigma=0.05$
- Stopping Criteria: the mean absolute error don't improve with patience 10 or number of epochs is 20000
- Fixed Learning Rate

We try to find a better loss function than common Mean Square Error (MSE). So we try also the Mean Absolute Error (MAE) with many learning rate  $(\eta)$  and batch size (mb) on the three dataset we have.

## 2 Results

Table 1: File3

$\mathbf{MSE}$			MAE					
$\eta = 1.0 \times 10^{-4}$								
mb	$\epsilon$	Loss	mb	$\epsilon$	Loss			
16	8	$3.16\times10^{-5}$	16	9	$4.45 \times 10^{-3}$
